Not enough little guys

2 Government employees retiring each day now

Secure | https://www.cnbc.com/2017/10/03/health-care-dilemma-10000-boomers-retiri

CNBC HOME U.S. NEWS MARKETS INVESTING TECH MAKE IT

Health-care dilemma: 10,000 boomers retiring each day

- Retiring baby boomers will more than double Medicare and Medicaid costs by 2020.
- Retired 65-year-old couples can expect to pay $275,000 in out-of-pocket expenses for health care, excluding long-term nursing care and rehabilitation — but only have a 50 percent chance of covering these costs.
- On the bright side, exorbitant health spending by baby boomers has driven innovation in health care.
- Scalable, independent solutions will be the most reliable way for the health-care industry to stay afloat.

CNBC

What do you get when an abundant demographic cohort hits the 65-year mark? A wave of baby boomers retiring in excess, to the tune of 10,000 men and women a day.

3 Companies change hand

4 People leave companies all the time

Attrition has always been expensive for companies, but in many industries, the cost of losing good workers is rising, thanks to increasingly tight labor markets. This makes measuring employee turnover more important for employers. How can you gauge if you're spending too much on employee turnover? What is the average employee retention rate?

Compensation Force measured the level of total separations in the United States 2016 at 15.1%. In other words, 15.1% of the total U.S. workforce left their job in 2016. The separation rate includes employees who voluntarily quit a position, layoffs, retirements and discharges.

SHRM predicts the annual turnover rate to be close to 19%, and also assumes that the average cost-per-hire to fill a position at $4,129. Some studies show that replacing an entry-level position can cost up to 40% of an employee's salary. Losing good employees is expensive, and in some cases avoidable.

Which industry are the winners, and losers, with employee retention?

Why are more people not doing this

Think that FedBizOpps is your answer? Tratar de nuevo (Try again). Take a look at this chart showing the amount of dollars the federal government spent in non-completive obligations in FY 2015. See chart. I pulled this down from one of the public information websites.

There are numerous ways to earn a decent living or garner tremendous success in the federal arena as a consultant, small business owner or large prime. Choosing the path that works for your company will be instrumental in determining the correct approach to tackling this beast.
