THE ALTUCHER REPORT

Bitcoin's Final Bull Run:

3 Penny Cryptos Set to Explode 10,000% or More in the Coming Weeks

Bitcoin's Final Bull Run:

3 Penny Cryptos Set to Explode 10,000% or More in the Coming Weeks

Dear reader,

On September 30th, just a few days from now...

Most Americans will miss the ONLY chance they'll ever have of retiring with a fortune. And they will regret it for the rest of their lives.

But you don't have to be one of them.

You see, if you're anything like most Americans, you probably want nothing to do with cryptocurrencies after the crash a few months ago — and considering the bloodbath we witnessed, I can't say I blame you.

But I'm here to tell you that if you choose to ignore cryptocurrency in the coming weeks... it could be the biggest mistake of your life.

Because while most investors think that crypto is dead and never coming back, the "smart money" on Wall Street is frantically loading up on as much bitcoin as they can get their hands on.

A few days from now, on September 30th, 2018, the SEC will publish a press release that could have a profound impact on your wealth and the wealth of your family for generations to come.

And it will go down in the history books as the single catalyst that catapults crypto into the mainstream, sending bitcoin on its biggest bull run ever — making it so expensive that most Americans will only be able to afford a tiny fraction of a coin.

So, if you sat on the sidelines during the crypto boom of 2017 — when countless people became overnight "crypto millionaires" — you have one last chance to cash in on the explosive cryptocurrency markets.

You simply have to position yourself in the right cryptocurrencies before September 30th. And you could stand to turn a single $100 bill into a retirement fortune in a matter of months.

Why am I so certain?

Because every bitcoin crash throughout history follows the *same three-step pattern…*

Pulling Back the Curtain on the Crypto Bull Run Pattern

No, I'm not talking about a "Fibonacci retracement" or a "double top reversal" pattern or anything complicated like that.

This pattern is so simple that you can use it even if you know nothing about cryptos — even if you've never invested in your life.

This pattern has a 100% track record of success.

I like to call it the "100X Bitcoin Formula". Because every single time it has occurred in bitcoin's history, investors have had the chance to walk away with an average gain of 10,570%.

That's more than 100X your money.

In fact, last time I used this formula, I personally made $1.8 million with a group of venture capital investors.

And I'm not talking about just buying bitcoin, the "granddaddy" of all cryptocurrencies.

Although you could do well by simply buying and holding bitcoin, you could make even MORE money with the three smaller cryptos I'll discuss below.

The Mainstream Media Has no Idea How Bitcoin Works!

In 2011, the mainstream media declared bitcoin dead as a doornail…

At the time, it had just tanked 93% from $31.50 to $2.10 and the media jumped at the opportunity to say that it was done for:

- Tech website *Good* called it "funny money" and said bitcoin was a "scam."
- *WIRED* published an article titled "The Rise and Fall of Bitcoin" claiming that bitcoin was "structured like a pyramid scheme"...
- *Forbes* came out with a piece called "So, That's the End of Bitcoin Then"... claiming that bitcoin had no use as a currency.

It's easy to see why most investors didn't get in on bitcoin with all the negative media attention it was getting. But what they didn't know was that this "100X Bitcoin" pattern was playing out at that very moment…

All they had to do to make a fortune was place a simple trade. And just over a year later, you would have been up 7,752%!

That's enough to turn every $100 into $7,752. And every $1,000 into a $77,520 windfall… in just 12 months.

This exact same pattern showed up again a year later.

The media declared bitcoin dead again in 2012… and six months later it shot up 2,382%!

And once more in 2014, dozens of news reports predicted the end of bitcoin in 2014… yet it skyrocketed from $91.66 to nearly $20,000 just three years later.

If you'd simply ignored what the clueless mainstream media was saying and bought Bitcoin at its low point... you would have captured a 21,577% gain in three years!

Enough to turn every $1,000 into $215,577… and every $10,000 into a $2,155,770 retirement fortune!

This **three-step millionaire-making formula** has occurred at least four times throughout bitcoin's history.

Put simply:

1. **Bitcoin crashes 70% or more**
2. **The media declares it "dead"**
3. **It experiences a *tremendous* rally within a matter of months giving investors the chance to make a fortune!**

And after the crash at the end of last year…

This same pattern — which has a track record of 100% success — is happening right now.

But there's one key difference...

Bitcoin is Gearing Up for Its Biggest and LAST Rally Ever!

That brings us to bitcoin's final crash, starting at the end of 2017.

We're seeing this exact pattern play out again, right before our very eyes. Bitcoin has now officially fallen more than 70% off its all-time high.

As usual, the media has published dozens of reports about "the death of bitcoin." And as usual, the media is about to be proven dead wrong, just like they were in 2011, 2012 and 2014.

Because bitcoin will follow the same pattern it has followed every crash throughout its history.

I can tell you with 100% conviction that this will be your last chance EVER to make a fortune in the crypto markets.

And it all starts on September 30th, when the SEC issues a statement changing the entire rules of the crypto game.

And when they do, it will trigger a mad rush into cryptocurrencies.

You could turn a single $100 bill into a retirement fortune in the next 12 months.

All because…

The SEC is Going to Announce its Ruling on a Bitcoin ETF

Right now, the SEC is considering a bitcoin ETF. And if it's approved, it will likely trigger a bull run on bitcoin and a select few alt coins unlike anything we've seen before.

And the decision the SEC will make on September 30th couldn't be clearer…

SEC Commissioner, Hester M. Pierce has already openly come out in support of a bitcoin ETF, even writing a 2,400-word public statement claiming that the rules of the exchange satisfy the SEC's requirements...

And going on to say "I reject the role of gatekeeper of innovation…"

The SEC chairman Jay Clayton has said: "The technology on which cryptocurrencies and ICOs are based may prove to be disruptive, transformative and efficiency enhancing."

One former SEC employee who left the organization just weeks ago told zerohedge.com, "I would expect a positive outcome in September..."

And when asked about the decision, a representative from the CTFC said: "I would call it about 90% at this point."

And here's what's really exciting, the organization that is filing to bring the first bitcoin ETF to the market — The Chicago Board Options Exchange — is the same organization that was approved for the first bitcoin futures exchange, which pushed bitcoin to nearly $20,000 in December of 2017.

Forbes even published an article recently saying: "It is nearly impossible that we will not see bitcoin ETF approved by the SEC."

The SEC has already stated that they'll make the announcement on September 30th,

So this is NOT speculation. They will make an announcement just days from now. And when they come out in favor of this new ETF, we'll see the price of bitcoin go nuclear.

How do I know? Put simply...

Every Time a Market Gets an ETF for the First Time, it Experiences a Flood of New Money

We've seen this exact situation play out numerous times before…

You see, when a market gets an ETF approved for the first time, it's a monumental event because it gives pension funds with trillions of dollars in assets a way of buying in.

Which sends money pouring into the market, pushing the asset higher, giving investors the chance to strike it rich!

Take gold for example.

When it finally got the greenlight for an ETF, $1.5 billion flowed into the market within two weeks.

But the money didn't stop there.

By 2011, investors had poured $74 billion into this ETF. And guess what all that flood of money did to gold? The yellow metal soared 470% from $332 to $1,892!

The same thing happened when the first silver ETF was approved. Financial institutions starting pouring money into the new ETF, causing the price of silver to skyrocket 242% from $14.22 to $48.75!

And again with palladium, which soared from $448 to $1,112!

Not bad, right?

But as we've seen with the explosive nature of cryptocurrency…

The market's response to a bitcoin ETF is almost guaranteed to be 100X bigger!

That's why I'm certain that when bitcoin's ETF is approved on September 30th…

We'll see a flood of institutional money pour in…

Pushing bitcoin to an all-time high...

Which is why you need to act RIGHT NOW.

But DON'T Rush to Buy Every Cryptocurrency Out There!

You see, right now there are over 1,900 cryptocurrencies available.

And if you blindly buy any of those, there's a 95% chance you'll lose all your money.

That's because — as I said on CNBC — 95% of them are worthless… and will eventually go to zero.

Here's the truth you won't hear anywhere else:

Many of these digital currencies don't have the technology necessary to make them a viable form of money. Some can be printed willy-nilly. Others can be easily hacked. And others are simply a scam.

How do I know that?

Because, aside from being a computer coder myself, I know other computer hackers who have looked into the codes of these currencies.

For example, one of my contacts analyzed the cryptocurrency The DAO… and discovered it was very susceptible to hacking.

I stayed away from that specific digital currency.

Sure enough, it was hacked and investors lost millions.

Look, I'll be the first to concede that most of these tiny cryptocurrencies are risky speculations, but if you're avoiding all cryptocurrencies ahead of this announcement, you're costing yourself tens of thousands... even millions of dollars!

I am now 100% certain that I've found three tiny cryptos that are set to explode 10,000% or more, starting when the SEC makes their announcement on September 30th.

3 Penny Cryptos Set to Explode

STELLAR (XLM)

I first got interested in stellar when multiple friends told me that they would build their crypto projects on stellar, not ethereum or EOS.

So I dug in. And the more I did, the more I liked it.

Unlike other cryptos, the team are dedicated to improving the technology, instead of spending all their time and money promoting themselves on social media. And the fact that tech insiders were buying more of it was an instant tip-off.

What's more, stellar solves some of the real-world problems of global commerce.

For one, you can move money fast. Payments arrive within two—five seconds and cost less than a penny.

And if you want to pay with dollars but the merchant only accepts yen, no problem. Stellar takes care of the whole conversion.

Many cryptos are all hype and no substance.

But not stellar. We've been keeping an eye on their progress behind the scenes.

They're working hard to make it a global payments solution. And their progress is real.

0X (ZRX)

The future of exchanges is decentralized. So no government or entity can dictate what tokens get traded and by whom.

That is a natural evolution. Yet it will take time for the average person to move away from the Coinbases of the world… and enter the new world of decentralization.

But it's coming.

All the exchanges know this and are planning for the future.

For example, in May, Coinbase acquired Paradex, a decentralized exchange built on 0x.

The best part about 0x — outside of the development team and backers — is that the transactions are cheap. That's because of the technology it uses.

0x is somewhat harder to use than other crypto. But 0x is already working to make the user experience better. Once that happens, more crypto investors will migrate to it.

Then it will rise in price fast.

Worldwide Asset eXchange (WAX)

WAX has everything you need to be an explosive crypto.

They have a great team, tons of money and more traction in their space than anybody. The smart money I know is accumulating.

I had a chance to chat with the co-founder at a recent crypto event and I have to say I walked away impressed. They are building for the future of digital assets.

Given the current market, we rate it a STRONG BUY.

Recommendation: If you don't already hold stellar, 0x and WAX in your portfolio, buy them before September 30th when the SEC announces its decision on the bitcoin ETF.
