Type of Ownership:	100% Women Owned Small Business
DUNS Number:	081028401
CAGE Code:	81C17
SAM Information:	Registration Completed

INTRODUCTION:

The work involved in the U.S. Fish and Wildlife Alaskan Region "Fish 150" is similar in nature to a recent government contracting podcast, Govcon Giants currently being produced by MJ Global. The Govcon Giants podcast consists of more than 100 guest interviews, publication of 60+ episodes, coordinated 100's of calendar invites, cancellations and reschedules.

Our team has edited more than 20,000 of hours of audio, uploaded more 10,000 hours of content to various national platforms widely used by millions of users worldwide such as: Stitcher, Spotify, Google podcast, Apple and iHeart radio.

Beyond broadcasting the podcast MJG is required to transcribe, repurpose and broadcast the content to a host of platforms. For example, our team can repurpose a 60-minute clip into 24 pieces of content that we then distribute across several media platforms: LinkedIn, Facebook, Instagram, Twitter, YouTube, and personal Blog. With your two 10-minute podcast it is possible to repurpose the content to be used across many alternative platforms to increase brand awareness to Fish 150.

SCOPE OF SERVICES:

We have reviewed the SOW completely and can deliver all the requirements as requested.

Produce and develop strategies for delivery of two podcast series 50 episodes each with a maximum time limit of 10 minutes per episode.

Podcast #1 will focus on "fish stories" where we highlight the diverse fish/fisheries and the Service's role in these important wild resources in Alaska aka Fish 150. Examples of stories may include those that highlight:

- Salmon in Arctic-Yukon-Kuskokwim
- Herring in Bristol Bay/Bearing Sea/Aleutian Islands
- Shellfish in Alaska Peninsula
- Rockfish in Chignik

And many other stories taking place in the Kotzebue Sound, Norton Sound, Bering Sea, Yakutat, Kodiak and Aleutian Islands.

Podcast #2 will capture employee stories and observations in the natural world. From technical sciences such as:

- Biological Science Technicians
- Fish Biologist
- Forestry Technicians
- Silviculture

And not excluding the maintenance, producers and stakeholders of the fisheries:

- Fisherman jobs
- Processor jobs
- Seafood harvesters
- Commercial vessel operators

With such a diverse mix of skilled and unskilled labor the uniqueness in the individual stories will make for a great compelling show. Alaska as the producer of 60% of the nations commercial fisheries broadcasting to the world, it will be the upmost importance how we craft the delivery of these stories to achieve the overall program goals.

PROJECT ORGANIZATION:

Our team is aware of the conditions that impact the delivery of a great podcast whether onsite or in the studios, recorded over Zoom or Skype. The varying degrees of quality from inferior to excellent impact the ability of U.S. Fish and Wildlife Service overall communication plan. We want to deliver high quality recordings that excite and stimulate the audience. Part of telling an effective story happens in the planning phase prior to the audio recording ever taking place.

Telling an engaging story begins with an effective Content Producer. This person will research the most effective way of telling the stories that celebrate the fisheries in Alaska and the Service's role in shared stewardship of wild resources, Fish 150.

An effective Content Producer sets the stage for the interview by delivering recent relevant and compelling information regarding guests to the Host in an effort to tell a great story. By thoroughly researching podcast guests prior to the interviews the Host can create a story that is universal, has a clear structure and purpose, appeal to human emotions and occasionally offer surprising and unexpected twists.

Other team members that will be key in delivering excellence in project expectations as needed or required include:

- Production Manager
- Audio Engineer
- Production Coordinator
- Host
- Audio Visual Technician
- Content Producer
- Graphics Designer (marketing communications)

With COVID impacting the world we are able to remotely work from throughout the United States to help bring the project to fruition. MJ Global will host an internal team Project Planning meeting to outline project goals and expectations after the initial U.S. Fish and Wildlife kickoff meeting.

TECHNICAL REQUIREMENTS:

MJ Global (MJG) has the expertise to develop a strategy and produce a podcast.

1. *Demonstrate ability and experience working in audio, producing podcasts, including equipment*

MJG is the executive producer behind the Govcon Giants podcast hosted by YouTube star, Eric Coffie. With more than 12,000 subscribers on YouTube and nearly 1M views the host approached MJ Global about expanded his audience reach via a podcasting platform. Unlike U.S. Fish and Wildlife, the host had no background knowledge other than using podcast as a medium for reaching a different audience.

MJG developed a long-term strategy and plan to create, develop and build out a podcast platform for the social media star. From naming to logo design, we helped shape Mr. Coffie's podcast from the onset and inception to execution and delivery. We helped derive the intro/outro heard on each and every episode and the exit content prior to episode termination.

Currently we support all activities required to produce, develop, plan and coordinate content for the podcast.
Our team here at MJG also perform market analysis to review what content resonates with his audience; provide marketing and communications support for Govcon Giants on all mediums. The podcast can be heard on Stitcher, Apple, iHeart radio, Spotify, Google Podcasts, YouTube and various other platforms.

Govcon Giants podcast is aimed at helping small business owners struggling in government contracting soar to new heights and achieve their dreams. Our mission is to deliver weekly relevant content from government officials, national award winners, successful entrepreneurs sharing their stories, experiences, resources, and tools used to combat the challenges of growing a small business so they too can achieve their dreams.

Since the inception of the host's Eric Coffie idea I created and continue to produce the podcast. We are a year into production and have released 65 episodes and 25,000 downloads. We are currently releasing one episode a week. I helped create the cover art and registered the art and title on Libsyn. We also registered it under Apple Podcast, Google Play, Spotify, iHeart Radio and Stitcher, where the podcast is currently streaming. I personally research and reach out to each guest to invite and further explain the process to have as a guest. We record the interviews via zoom where the files are downloaded and edited for the time marks to send in for the editors to complete. At launch we had the website in place that contains the show notes and pictures for each guest.

MJ Global has demonstrated ability and experience working in audio, producing podcasts, including bringing own equipment (recording and editing) to the project.

In producing the Govcon Giants podcast show MJG has acquired all of the necessary machines, tools and equipment for producing a high-quality nationally distributed podcast. Some of the equipment that we use include the following:

- iMac PC
- Cannon DSLR EOS 80D
- Xenyx Q1202 Sound Board
- Audio Technica microphones
- Logitech USB Headset

We are currently working with the software and programs listed below to produce our podcast:

- Libsyn – Podcast hosting explain
- Rev.com – Transcription services explain
- Zoom – video conference for recordings e
- Skype – video/audio recording

2. *Skill and experience in facilitating developing creative communications planning, marketing communications products; and content production.*

For communications planning MJG uses a combination of Calendly, Outlook and Zoom. Event scheduling using Calendly allows everyone to easily coordinate persons with difficult schedules. Meeting confirmations using Outlook, connected with the Zoom link invites helps remind guest of event schedules.

- Calendly – coordinated invitation scheduling
- Microsoft Outlook- emails
- Zoom

After the episodes are recorded MJG must begin post production, editing in preparation for media distribution. See job function, roles and responsibilities of each team member in Exhibit A.

MJ Global has the skill and experience in facilitating and developing creative communications planning marketing communications products; and, content production.

Prior to launch date of any new episode the Graphics designer creates thumbnails in multiple sizes, formats for marketing distribution on all social media platforms: Instagram, LinkedIn, and Facebook to market the episode. We can even include SnapChat and TikTok if the client would like to pursue.

- After every episode we have a cover art created to market the episode in all social media platforms.
- Our creative team creates cover arts and thumbnails for the episodes.
- Production manager will facilitate communication plan and meetings to update the staff on progress.

Technical tools used for marketing

- Get Response (mass emailing for marketing communications)
- Google Meet (alternative recording publicly available)
- Bonjouro – mass communications delivery
- Anchor – podcast alternatives
- FaceBook Groups – community building
- IG pages – marketing dissemination

3. *Experience incorporating distinct Alaska and Alaska Native perspective into communication products*

The Govcon Giants podcast that we produce has highlighted and featured multiple Alaskan Native Corporations and Tribal Corporations as guest on its' podcast.

Episode 55: Doing business as an Alaska Native Corporation (ANC) with Sonia Mundra president of Chenega Analytic Business Solutions who is leading the charge with this newly formed IT company. During the interview she talks about the direction of the organization and the benefits of working as an ANC.

In fact, on the IG page, YouTube channel and LinkedIn profile we have chronicled Chenega Analytic on multiple occasions in both long form and short form content. https://govcongiants.com/podcast/doing-business-as-an-alaska-native-corporation-with-sonia-mundra/

Other examples include:

- Episode 39: Mark Masters – Firefighter turned Inc 5000 Award Winner is a tribal citizen of the Cherokee Nation of Oklahoma discusses his varied experiences as business owner who grew up on a tribal land.

- Episode 37 features Andy Wells of Wells Technology. Interviewed with our host, Eric Coffie outlining many of the hardships and stories of tribal members where he grew up on the Red Lake Reservation as a member of the Red Lake Ojibwa Tribe. His intention was to create jobs for economically disadvantage people.

- Rick Grams II is the Vice President and General Manager of Miami Technology Solutions, owned by the federally recognized Miami Tribe of Oklahoma.

Exhibit A

Production Manager

- Will be responsible to host a kick off meeting with a small podcast project team made up of Service employees.
- Responsible for registering the podcast in all platforms, this include Apple podcast, Google Podcast, iHeart Radio, Spotify and Sticher.
- PM will recommend cover arts for the two series.
- PM will recommend intro to be used at the start of each podcast.
- PM will take raw audio file and time stamp it for editor.
- When first draft is produced they will review to create a master file.
- PM will be uploading the master file and release it to the streaming platforms.
- PM will send the episode to be transcribed using Rev.com. They will review the transcription and covert it to a pdf for the public.

Audio Engineer

- Will use the time stamps and edit from PM and make necessary edits to produce the master audio file for release.
- Works with the mechanics of recording, mixing, and reproducing sound. Audio Engineers deal specifically with the technical and the mechanical aspects of sound.

Production Coordinator

- Will be responsible for producing and upkeeping master calendar.
- Will schedule and distribute invites for the kick-off meeting and other project update meeting over the course of the project.
- Production Coordinator will be responsible to contact the guests and employees for interviews.
- They will set meetings on Zoom and send out invites.
- Production Coordinator will be sending reminder emails and thank you emails.
- Manages the variable elements of the production and production expenses, including timeline, personnel scheduling, equipment availability, travel, and sometimes craft services. Communicates with clients, crew, talent, and outside resources to ensure scheduling issues do not arise. Creates call sheets and maintains an effective production schedule.

Host

- Will be responsible for interviewing the guests.
- Will be responsible for helping narrate the story line.
- Will be responsible for helping the guest have a flow when speaking.

Audio Visual Technician

- Will be responsible for making sure all equipment is set correctly and running properly.
- Will assure microphones are set for best audio quality.
- Will be there to assist when technical difficulties arise.
- Troubleshoots audiovisual equipment and works with audio mixing and distribution systems, video systems, along with computer hardware and software. Sets up and operates projection systems, audio systems, microphones, and room control systems. Skilled in assisting presenters with PowerPoint software and computer interfaces to the AV systems. May also manage additional support personnel on more sophisticated projects.

Graphics Designer (marketing communications)

- The Graphics Designer works under the supervision of the art director to develop multiple graphics options for video and public relations clients. Presents options to the client and provides concept explanations. Creates artwork as needed from concept development through postproduction. Oversees project budgets.

Content Producer

- Topic specific research and content strategy plan
- The Content Producer creates, builds and publishes content for client websites, digital and social media platforms. Responds to reader comments and questions as required. Manages daily updates through content management systems to keep subscribers and prospects up-to-date with schedule and program information. The Content Producer is adept at using complex content and scheduling systems, comfortable tracking large amounts of information and offers a proven blend of editorial skills (copy writing, social media best practices) and technical know-how.
